DETAILED ACTION

1. This action is in response to communications filed May 12, 2010. Claims 1, 6 and 8-18 remain pending in the application.

Response to Arguments

2. In response to applicant's arguments filed May 12, 2010, the examiner agrees Kelly fails to expressly disclose assigning to a computer a unique full digital code address (FDCA) that is adapted to replace IP address-domain name address coding solutions and identifying the computer in the network only by the FDCA on a network layer without converting the FDCA to an IP address, as claimed in claim 1. Nevertheless, as expressed in previous actions, the examiner submits applicant's disclosure fails to provide support for such teachings. In fact, the disclosure seems to teach otherwise. For example, in the 2nd full paragraph on the 3rd page of the disclosure applicant recites, "The full digital code address (FDCA) can be interpreted by the dedicated interpreting software into IP address..." Such teachings fail to suggest that the FDCA is adapted to replace IP address-domain name address coding solutions and identifying the computer in the network only by the FDCA on a network layer without converting the FDCA to an IP address. Thus, applicant's arguments with respect to claims 1, 6, and 8-18 are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1, 6, and 8-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

5. Independent claims 1 and 18 have been amended to similarly recite assigning to a computer a unique full digital code address (FDCA) that is adapted to replace IP address-domain name address coding solutions and ***identifying the computer in the network only by the FDCA on a network layer without converting the FDCA to an IP address***. After a careful review of applicant's disclosure, support for the amended limitations could not be found. In fact, the examiner only found teachings that suggested otherwise. For example, in the 2nd full paragraph on the 3rd page of the disclosure applicant recites, "The full digital code address (FDCA) can be interpreted by the dedicated interpreting software into IP address..." Such teachings fail to suggest that the FDCA is adapted to replace IP address-domain name address coding solutions and identifying the computer in the network only by the FDCA on a network layer without converting the FDCA to an IP address.
